

## 1 What I've done

- Started disassembling UAV (everything I could do without a screwdriver. Motors can remain attached to arms.)
- Had a chat with Jean-Luc about what the UAV will end up as (as close to his as possible but with a different frame to try to increase dampening – need to ask Alex about the frame)
- Emailed Alex about induction, should hopefully get this done in the next few days
- Started filling in the project proposal form (see attached)

## 2 Parts of report to look at

- Outline - can just have a look at the title page and the contents (page 2)

## 3 Questions

- Any suggested papers?
- Should I put things like model names for frames/where we bought them in my report? If so, who should I ask for this information?

## 4 Comments

- Apparently the TX2 is in, so I should be able to use that for the UAV
- Need to fill in project proposal form (due 16th March – end of week 4). Have attached a copy that I have started filling in.
- Mid-semester report due Friday 25 May, 2018 (only 4 pages)
