

The graph displays the performance of various skip lengths over 100 epochs. The 'skip 80' series (pink) shows a significant performance increase after epoch 30, peaking around epoch 50 and then fluctuating at a high level. The other series (skip 20, 30, 40, 50, 60, 70, 90) remain relatively flat and low, with some minor fluctuations between epoch 70 and 100.
