1 What I've done

- Got my code building on the TX1

- Got librealsense built on host (but haven't done much with it yet)

- Put 16GB SD card into the TX1, formatted, mounted, etc.

- Got Intel example code to save images in SD card

- Data acquisition code – started but still needs some work

- Emailed Jean-Luc to confirm his code will give me IMU data (it will but he doesn't have anything for synchronization)

2 Parts of report to look at

- Hasn't changed since last week

3 Questions

4 Comments

- I have one spare 16GB micro SD card and case so it'll fit into an SD slot that I'm using. But I will probably need another one for the TX2.
