1 What I've done

- Started assembling UAV (Frame done, most of the wiring done. Still need to attach gimbal, RealSense and TX2 and to set up the transmitter and receiver.)

- Updated project propsal form after last week (see attached).

- Started reading about ICP (just the surveys so far).

- Started setting up TX1 (at home) – will probably have to re-do this though as I'm currently using a vm.

2 Parts of report to look at

- Updated outline - can just have a look at the contents

- Started introduction - 2 on page 2

- Started lit review - 3.1 on page 2. Right now only results from the two surveys, so will need to add more papers. Will probably also have to add papers that were referenced in the surveys.

3 Questions

-

4 Comments

- Jean Luc says I need to either borrow a laptop or dual-boot mine. Haven't dual booted yet but I have a 73GB partition that I could probably use for that (Jean Luc said 50GB should be more than enough).

- I have a gimbal, not mounted yet though.

- Having some trouble setting up the reciever and controller.

- Need to get project propsal form signed soon (due end of next week).
